- Ensures compliance with regulations such as SAS 70 Type I, SAS 70 Type II and the Foreign Corrupt Practices Act

Preparedness is Key to Weathering Disaster

Planning for disasters means more than backing up your data every night and having an evacuation plan for employees. The key to keeping your business operational despite a system attack or natural disaster is to have a blueprint by which your company will operate during that critical time.

Detailed business continuity and disaster recovery plans should be critical components of any organization's operating plan. In fact, the cost of not planning for the unexpected has been shown to reach literally into the millions of dollars. Nevertheless, creating and implementing plans in each of these areas can be time-consuming and daunting.

Sentigy enables you to more quickly and easily develop a solid plan for business continuity and disaster recovery by doing the majority of the legwork for you. Whether you need a plan created, updated, documented, tested or audited, Sentigy can help.

Our proven business optimization tool Sentigy PathwaysSM enables you to make smart choices about how to implement the best policies, practices and technologies to keep your business on track during a disaster. And because our approach is both business savvy and vendor-independent, we are able to deliver world-class performance that is right-sized for your budget.

Sentigy's business continuity and disaster recovery planning process is based upon the Business Continuity Planning Institute and Disaster Recovery Institute International DRP model.
