- Assess current maturity levels & develop programs to increase security
- Remedy outstanding security issues
- Build internal knowledge base of security issues
- Create documentation necessary for ongoing maintenance and improvement

### Information security programs that work...

Information security is a challenge to understand and manage. Imposed sanctions and increasing pressure from insurance companies, shareholders, and the media are necessitating that organizations develop appropriate security controls to safeguard the customer data, personal, and private information.

Organizations must develop security programs that provide a robust and scalable implementation in support of the business.

Sentigy's team has experience developing security programs for many organizations of varying size and architectures. Utilizing Sentigy Pathways<sup>SM</sup>, our proprietary business optimization tool, we perform a careful assessment to determine exactly where your company stands from a security standpoint. The Sentigy team then uses an independent, vendor-neutral approach to help you determine the best course of action. Finally, Sentigy implements the solution and assists in the documentation of processes and procedures.

### Our Services

- Penetration Testing
- Security Operations Management
- Incident Response Program Development
- Information Security Awareness and Training Program Development
- Patch Management and IDS Deployment
- Incident Response Programs
- Policy Development
- Patch Management Solutions
- Network Architecture Security
- Vulnerability Assessment
- Security Architecture Modeling
- Security Remediation
- Security Maturity Discovery
- Gap Analysis
- Policy and Procedure Development
- Security Awareness Programs
- Procedure Development
- Intrusion Detection System Deployment
- Vulnerability Remediation
